

Many libraries would love to have their microfilm collections digitized but may not have the resources to do so. **World Archives** has a free digitization program that can help these libraries.

Objective:

World Archives has the world's largest online archive of newspaper content (more than 170 million pages) and is looking to add pre-1978 (non-copyrighted) content to add to its collection on **Newspaperarchive.com** and provide to the library for their use.

Offer:

- World Archives will ship your 35 mm **silver microfilm** of the newspaper content to our production facility in San Diego (complete with \$100,000 insurance per delivery) and return it to you free of charge.
- Digitize your film collection in **400 dpi grayscale** PDF images free of charge to produce a digital archive of your microfilm. ◦Optical Character Recognition (OCR) is included in the **free digitization**, making the content fully searchable by dates and key words.
- Add the digitized content to a branded site created for you at no charge, as well as **NewspaperArchive.com** and make it available for other commercial sites.
- Provide you with a copy of the images (non-searchable). ◦You would only pay for the hard drive (or other medium) to store the images, and those images will be **yours for free forever**.

Trial of the site:

Free Trial to **Access.Newspaperarchive.com** (this is the institutional version of Newspaperarchive.com and is IP authenticated) for up to a 2-week period.

Expiration Date of the Offer:

At this time, there is **no expiration date** set for this offer.
